DETAILED ACTION

Response to Amendment

1. The preliminary amendment received 12/09/05 has been entered in full.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The USPTO "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" (Official Gazette notice of 22 November 2005), Annex IV, reads as follows (see also MPEP 2106):

Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." In this context, "functional descriptive material" consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of "data structure" is "a physical or logical relationship among data elements, designed to support specific data manipulation functions." The New IEEE Standard Dictionary of Electrical and Electronics Terms 308 (5th ed. 1993).) "Nonfunctional descriptive material" includes but is not limited to music, literary works and a compilation or mere arrangement of data.

When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32 USPQ2d 1031, 1035 (Fed. Cir. 1994) (claim to data structure stored on a computer readable medium that increases computer efficiency held statutory) and *Warmerdam*, 33 F.3d at 1360-61, 31 USPQ2d at 1759 (claim to computer having a specific data structure stored in memory held statutory product-by-process claim) with *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory).

In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory. See *Lowry*, 32 F.3d at 1583-84, 32 USPQ2d at 1035.

3. Claim 9 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter as follows. Claim 9 defines a computer program product embodying functional descriptive material (i.e., a computer program or

computer executable code). However, the claim does not define a "computer-readable medium or computer-readable memory" and is thus non-statutory for that reason. The Examiner recommends amending the claim to read -Computer program product stored on a computer readable medium comprising computer program means...

Allowable Subject Matter

4. Claims 1-8 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record discloses determining a plurality of motion fields for a plurality of temporal bins and then, using a motion field for forward-projecting an intermediate image to form second data, wherein the second data are compared with original data to update the intermediate image on the basis of the difference between first and second data. Although claim 1 is a method claim, at least the step of forward-projecting an intermediate image for forming second data by using a motion field of the plurality of motion fields that belongs to the selected temporal bin must inherently be carried out on a computer, thus the invention is tied to a machine.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 2004/0081269 Retrospective Respiratory gating for imaging and treatment.

US 5,555,324 Method for generating a synthetic image by the fusion of signals representative of different views of the same scene.
